Rainbow Range

Introducing a new dimension in washrooms.

When you require a solution that just works, Rainbow provides the answer, being one of the most popular and well established ranges that we offer. It is specifically designed for children, from nursery right through to junior school age and has, over the years, been tailored to ensure it creates a safe, hygienic and bright washroom environment for children.

Using vibrant colours with contrasting edges, with the added options of multi-coloured hardware and our bespoke screen printing service which offers a collection of bright and inventive designs for children, we can help you to re-invent your washroom area and turn it into a bright, clean and exciting environment for children.

Should you wish to add a personal touch, we can also encompass your own design or motifs within our cubicles to give you a truly unique washroom.

Rainbow offers specifically shaped and sized doors and partitions to ensure children receive all the privacy they require, while maintaining a suitable level of supervision for their safety. If required, Rainbow is also available with ambulant sized access to ensure compliance with the Building Regulations part M. Rainbow also offers IPS panels, Vanity Units and Wall Clad systems to suit.

Total Cubicle Solutions take pride in providing a personalised, professional and cost effective service and can offer a fast turnaround for the tightest of deadlines and having built up a reputation for superb after sales support, our goal is to supply your cubicles with the minimum of fuss, ensuring that from the start to finish, your project runs smoothly.

All this, and the added reassurance that you are dealing with people with over 75 years experience in the industry.

Installation Instructions

Please look over the enclosed drawings to familiarise yourself with the parts required to construct your cubicle. Check that the sizes you have provided for manufacture are correct and match the sizes on site.

Installing The Partitions

Please Note: We no longer pre-drill the partitions as Soil Stacks and Window Placements can compromise the fitting position. Normally our Cubicles are divided equally along the wallspace except where Ambulant or Disabled Cubicles are to be implemented.

Step 1

Fix the partition channel brackets to the rear wall using 35x4mm posi screws and red plugs.

Step 2

The partitions should be set up 135mm off the floor on the adjustable leg provided. Tighten the Allen Head Clamp down securely on the partition

Step 3

Next check the squareness of the partition and then fix the height adjustable leg to the floor with 35x4mm posi screws and red plugs, (please ensure before drilling that no under floor heating is present).

Installing Pilasters

Step 4

Start by installing an end pilasters back to the wall on the brackets provided, using 35x4mm posi screws and red plugs.

Set the pilaster height 135mm up from the floor to match the partition height and tighten the T-Nuts down securely on the pilaster

Step 5

Fit the channel brackets centrally to the back of the centre pilaster, pilot the holes 10mm deep and fix with 20x4mm B2P screws.

Fit the pilaster by bolting through with the T-Nuts provided. Tighten securely with an Allen Key.

Check Measurements

Step 6

Next, measure the door aperture; it should measure 35mm less than the overall width of the door. If this matches, you can continue on, installing the remaining centre pilasters, again checking the aperture and measurements as you go.

Installation Instructions

Please look over the enclosed drawings to familiarise yourself with the parts required to construct your cubicle. Check that the sizes you have provided for manufacture are correct and match the sizes on site.

Fit The Channel Headrail

Step 7

The Channel headrail is what braces the whole cubicle construction, so correct fitment of this item is essential. Start by cutting the headrail to the correct length. Next, fit the rail over the pilasters between the partitions using 35x4mm screws.

Pre-drill the pilasters through the top of the headrail and affix 3 15x4mm screws into the top of each pilaster bracing the construction.

Accessories

Step 9

Fit the hat, coat hook and toilet roll holders at the desired height using the 20x4mm B2P screws piloted to 15mm depth.

Please Note: We can, upon request, provide T-Nuts so the hinges and pillaster are bolted through. This is sometimes a more robust solution when vandalism is prevalent, though standard construction is aesthetically more pleasing to look at than the bolt through option.

E: sales@totalcubicles.co.uk

Fitting The Doors And Lock Keeps

Step 8

The doors provided should overlap the aperture by 35mm. The door should now be fitted ensuring an equal overlap of 17.5mm on either side of the pilaster/aperture.

Use the 25x4mm screws piloted to a depth of 20mm to fit the hinges and 25x4 screws piloted to 20mm deep to fit the lock back plate assembly. Next fit the lock keep on the pilaster with 25x4mm screws.

Please Note: The nylon cams in the hinges can be adjusted to allow the door to swing open or closed. To change the operation of the closure, remove the nylon cam and turn in through 90 degrees. The locks are also symmetrical and can be used on either side of the door.
